

1.LOGIC GATES

AIM: Write a VHDL code for all the logic gates.

#1-TITLE: AND gate

LOGIC GATE SYMBOL:

TRUTH TABLE:

x	y	z
0	0	0
0	1	0
1	0	0
1	1	1

VHDL CODE:

```

Library IEEE;
use IEEE.std_logic_1164.all;

entity AND2 is
    port(
        x : in STD_LOGIC;
        y : in STD_LOGIC;
        z : out STD_LOGIC
    );
end AND2;
```

--Dataflow model

```
architecture behav1 of AND2 is
begin
```

```
    Z<= x and y;      --Signal Assignment Statement
```

```
end behav1;
```

-- Behavioral model

```
architecture behav2 of AND2 is
begin
```

```
    process (x, y)
    begin
```

```
        if (x='1' and y='1') then -- Compare with truth table
```

```
            Z <= '1';
```

```
        else
```

```
            Z <= '0';
```

```
        end if;
```

```
    end process;
```

```
end behav2;
```

OUT PUT WAVE FORM:

OUTPUT WAVEFORM:**VIVA QUESTIONS:**

1. Implement the following function using VHDL coding. (Try to minimize if you can).

$$F(A,B,C,D) = (A' + B + C) \cdot (A + B' + D') \cdot (B + C' + D') \cdot (A + B + C + D)$$

2. What will be the no. of rows in the truth table of N variables?
3. What are the advantages of VHDL?
4. Design Ex-OR gate using behavioral model?
5. Implement the following function using VHDL code

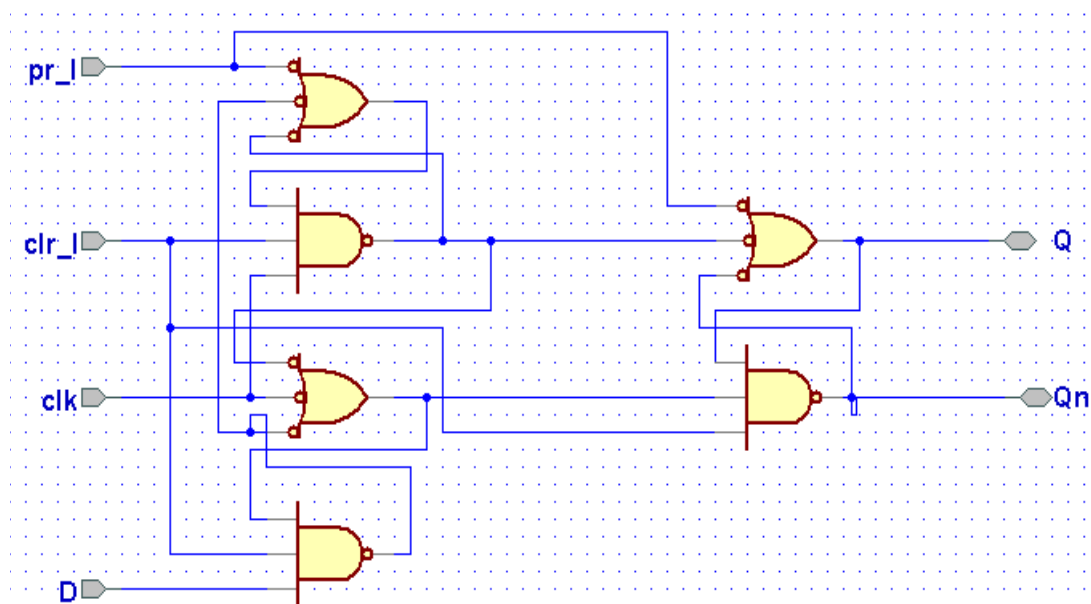

$$f = AB + CD.$$
6. What are the differences between half adder and full adder?
7. What are the advantages of minimizing the logical expressions?
8. What does a combinational circuit mean?
9. Implement the half adder using VHDL code?
10. Implement the full adder using two half adders and write VHDL program in structural model?

2.IC7474—A POSITIVE EDGE TRIGGERING D FLIP FLOP

AIM: Write a VHDL code for IC7474—a positive edge triggering D flip flop.

TITLE: IC7474—a positive edge triggering D flip flop.

CIRCUIT DIAGRAM:

TRUTH TABLE:

clr_l	pr_l	Clk	d	q	qn
0	0	X	X	1	1
